Problem Description:

Aaron took his girl friend Binita to a restauraunt as he got a job of his dreams.

Since he had small welcome interview he was little bit tennsed.

Binita figured this out and to get back Aaron's confidence she gave him a little task,

When they received the bill for the food they ordered,she asked aaron to find out the tax amount of the bill and tip for the meal through a computer code.

Aaron can use your local tax rate when computing the amount of tax owing.

Can you help aaron to code the suitable logic.
Note:

Local tax= 18%
Tip amount=5%
Constraint:
50≤billwt≤1300

Where billwt is the variable you should use for getting the bill amount without tax and tip.

Input format:
Single Line of input has single value of type integer representing the Bill Amount Without Tax and Tip

Output format:
In First Line Print the calculated Tax with only 2 values after decimal point.

In the Second Line Print the calculated Tip with only 2 values after decimal point.

In the Third Line Print the Total Bill Amount with tax and tip with only 2 values after decimal point.
